1. Introduction / Signs and Symbols

1.1 Introduction

Dear Customer

Thank you for having purchased the Programat® EP 5010. It is a state-of-the-art press and ceramic furnace for dental applications. The furnace has been designed according to the latest industry standards. Inappropriate use may result in certain risks. Please observe the relevant safety instructions and read these Operating Instructions carefully.

We hope that you will enjoy working with the Programat EP 5010.

1.2 Signs and symbols used in these Operating Instructions

The signs and symbols used in these Operating Instructions facilitate the finding of important points and have the following meanings:

<table>
<thead>
<tr>
<th>Symbol</th>
<th>Note</th>
</tr>
</thead>
<tbody>
<tr>
<td>⚠️</td>
<td>Risks and dangers</td>
</tr>
<tr>
<td>📘</td>
<td>Important information</td>
</tr>
<tr>
<td>🟨</td>
<td>Contraindication</td>
</tr>
<tr>
<td>⚠️</td>
<td>Burn hazard</td>
</tr>
<tr>
<td>⚠️</td>
<td>Risk of crushing</td>
</tr>
<tr>
<td>📘</td>
<td>The Operating Instructions must be read.</td>
</tr>
</tbody>
</table>

1.3 Notes regarding the Operating Instructions

Furnace concerned: Programat EP 5010
Target group: Dental technicians, dental professionals

These Operating Instructions facilitate the correct, safe and economic use of the furnace. Should you lose these Operating Instructions, extra copies can be ordered at a nominal fee from your local Ivoclar Vivadent Service Center or downloaded from www.ivoclarvivadent.com.
1.4 Notes on the different voltage versions

The furnace is available in different voltage versions:

– 110–120 V / 50–60 Hz
– 200–240 V / 50–60 Hz

In the Operating Instructions, the furnace is described in the 200–240 V voltage version. Please note that the voltage range shown on the images (e.g. rating plate) may differ depending on the voltage version of your furnace.

1.5 Notes on the images in these Operating Instructions

All images and illustrations in these Operating Instructions are used for exemplification and the details are not authoritative for the construction of the furnace. They are symbols which may slightly differ from the original, e.g. due to simplification.
2. Safety First

This chapter is especially important for individuals who work with the Programat EP 5010 or who have to carry out maintenance or repair work. This chapter must be read and the corresponding instructions followed!

2.1 Indications

The Programat EP 5010 must only be used to press and fire dental ceramic materials and it should be used for this purpose only. Other uses than the ones stipulated, e.g. cooking of food, firing of other materials etc., are contraindicated. The manufacturer does not assume any liability for damage resulting from misuse. The user is solely responsible for any risk resulting from failure to observe these instructions.

Further instructions to assure proper use of the furnace:
– The instructions, regulations and notes in these Operating Instructions must be observed.
– The instructions, regulations and notes in the material's Instructions for Use must be observed.
– The system must be operated under the indicated environmental and operating conditions (Chapter 9.3).
– The Programat EP 5010 must be properly maintained.

Risks and dangers

The furnace head should not be removed from the furnace base as long as the furnace head is connected by means of the heater cable.

Make sure that no liquids or other foreign substances enter the furnace.

**Burn hazard**: Never place objects in the firing chamber by hand, since there is a burn hazard. Always use the tongs (accessories) supplied for this purpose. Never touch the hot surface of the furnace head, as there is a burn hazard.

Do not carry the furnace by the cooling tray.
2. Safety First

The furnace head must not be carried by holding the cables, as there is a risk of damaging the cables and the corresponding connections.

The furnace head has an electric drive and must be operated by means of the electronic controls. Never open the furnace head by hand, since the mechanism will be damaged.

The furnace must not be operated if the quartz tube or the insulation in the firing chamber is damaged. There is a risk of electric shock upon contact with the heating wire. Avoid damage of the insulation by contact with the investment tongs or firing tongs.

Contraindications

Firing trays must not be placed in the area surrounding the firing plate, since this will obstruct the closing of the furnace head.

Foreign objects must not be placed on the furnace head or the air vents. Make sure that no liquids or other foreign objects enter the air vents, since this may result in an electric shock.

Never use the furnace without a firing plate.
Do not touch the thermocouple or the quartz tube in the firing chamber. Avoid contact with the skin (grease contamination), as the parts will be prematurely damaged.

Avoid contact with the skin (grease contamination), as the parts will be prematurely damaged.

Never reach under the furnace head with the hand or other parts of the body during operation. There is a risk of burning and crushing.

Never reach inside the rear cover with the hand or particularly with the fingers. There is a risk of crushing.

Do not insert any foreign objects into the air vents. There is a risk of electric shock.

This product contains ceramic fibres and may release fibre dust. Do not use compressed air thus distributing the dust in the environment and observe the additional notes on page 13.

Risk of crushing / burn hazard
2.2 Health and safety instructions

This furnace has been designed according to EN 61010-1 and has been shipped from the manufacturer in excellent condition as far as safety regulations are concerned. To maintain this condition and to ensure risk-free operation, the user must observe the notes and warnings contained in these Operating Instructions.

– It is important that the user becomes familiar with the warnings and operating conditions to prevent injury to personnel or damage to materials. The manufacturer is not responsible for damage resulting from misuse or failure to observe the Operating Instructions. Warranty claims cannot be accepted in such cases.

– Before switching the furnace on, make sure that the voltage indicated on the rating plate complies with your local power supply.

– The mains socket must be equipped with a residual current operated device (FI).

– The power plug acts as a circuit breaker and may only be connected with an easy-to-access power socket with protective contact.

– Only use the supplied original power cord. Do not use an inadequately measured replacement.

– Place the furnace on a fire-proof table: Observe local regulations (e.g. distance to combustible substances or objects, etc.).

– Always keep the air vents at the rear of the furnace free from obstruction.

– Do not touch any parts that become hot during operation. Burn hazard!

– When removing hot components from the firing chamber (e.g. firing plate, firing tray), make sure not to place them on a flammable surface!

– Clean furnace only with a soft, dry cloth. Do not use solvents! Disconnect the power plug before cleaning and allow the furnace to cool down!

– The furnace must be cool before it is packed for transportation.

– Use original packaging for transportation purposes.

– Before calibration, maintenance, repair or change of parts, the power must be disconnected and the furnace has to be cool if it has to be opened.

– If calibration, maintenance or repair has to be carried out with the power connected and the furnace open, only qualified personnel who are familiar with the risks and dangers may perform the procedures.

– After maintenance, the required safety tests (high voltage resistance, protective conductor) must be carried out.

– Make sure that only fuses of the indicated type and rated current are used as replacements.

– If it is assumed that safe operation is no longer possible, the power must be disconnected to avoid accidental operation. Safe operation is no longer possible if
  – the furnace is visibly damaged;
  – the furnace does not work;
  – the furnace has been stored under unfavourable conditions over an extended period of time.

– Use only original spare parts.

– The temperature range for faultless operation is +5 °C to +40 °C.

– If the furnace has been stored at very low temperatures or high atmospheric humidity, it must be dried or left to adjust to the room temperature for approx. 4 hours prior to connecting power.

– The furnace is tested for use at altitudes of up to 2,000 m above sea level.

– The furnace may only be used indoors.

– Before leaving the factory, the furnace functions were tested for several hours. It is therefore possible that these tests have caused slight discolouration of the insulation. Nevertheless, your Progmat EP 5010 is still a brand new furnace.
Any disruption of the protective conductor either inside or outside the furnace or any loosening of the protective conductor may lead to danger for the user in case of a malfunction. Deliberate interruptions are not permissible.

Materials developing harmful gases must not be fired.

Warnings regarding the removal of the heating muffle

This product contains ceramic fibres and may release fibre dust. Fibre dust has proved to be carcinogenic in animal experiments. The heating muffle may only be dismounted by a qualified After Sales Service Center. Information regarding the Safety Data Sheet is also available from your After Sales Service Center.

Disposal:

The furnace must not be disposed with the common domestic waste. Please correctly dispose of old furnaces according to the corresponding EU council directive. Information regarding disposal can be found on the respective national Ivoclar Vivadent website.
3. Product Description

3.1 General

The Programat EP 5010 is a state-of-the-art press and ceramic furnace for dental applications. The firing chamber may be heated up to max. 1200 °C by means of a heating element. The pressure for the press procedure is generated by a press drive. Furthermore, the firing chamber has been designed in such a way that a vacuum may be created with a vacuum pump. The firing / press programs are controlled with the corresponding electronic controls and software. Additionally, the set and actual temperatures are continuously compared.

The Programat EP 5010 consists of the following components:
- furnace base with electronic controls
- furnace head with firing chamber and press drive
- cooling tray
- firing plate
- power cord and hose for vacuum pump.

3.2 Hazardous areas and safety equipment

Description of the risk areas of the furnace:

<table>
<thead>
<tr>
<th>Hazardous area</th>

</tbody>
</table>
4. Installation and Initial Start-Up

4.1 Unpacking and checking the contents

Remove the furnace components from their packaging and place the unit on a suitable table. Please observe the instructions on the outer packaging.

There are no special transportation grips on the furnace. Support the bottom of the furnace to carry it. Check the delivery for completeness (see delivery form in Chapter 9) and transportation damage. If parts are damaged or missing, contact your local Ivoclar Vivadent Service Center.

We recommend keeping the original packaging for future service and transportation purposes.

4.2 Selecting the location

Place the furnace on a flat table using the rubber feet. Make sure that the furnace is not placed in the immediate vicinity of heaters or other sources of heat. Make sure that air may properly circulate between the wall and the furnace. Also ensure that there is enough space between the furnace and the user, as the furnace releases heat during the opening of the furnace head.

The unit should neither be placed nor operated in areas where there is an explosion hazard.
4. Installation and Initial Start-Up

4.3 Assembly

Assembling the furnace is very easy and involves only few steps. Before you start assembling the furnace, make sure that the voltage indicated on the rating plate (32) complies with the local power supply. If this is not the case, the furnace must not be connected!

Step 1:
Mount the cooling tray (2).
Remove the two screws for the cooling tray and the transport protection for the infrared camera.

Place the cooling tray (2) on the frame plate (24). Make sure that the cooling tray is correctly positioned on the frame plate.

Secure the cooling tray with the two screws (1).

Step 2:
Place the firing plate.
Place the firing plate (22) on the firing plate holder (23). If placed correctly, the bottom of the firing plate is automatically centred in the firing plate holder.
Step 3:
Mount the furnace head.
The furnace head is best mounted with the rear panel of the furnace pointing towards the user. Lift the furnace head with both hands (see picture) and carefully position it on the furnace head mounting.

Position the furnace head mounting as shown in the picture until the furnace head audibly snaps into place. Make sure that the firing plate and the insulation are not damaged by mounting the furnace head.

Step 4:
Connect the cables.
Connect the cables of the furnace head with the furnace base. Proceed as follows:
– Connect the vacuum hose.
– Insert the thermocouple plug (make sure that the polarity of the plug is correct).
– Insert the press drive plug.
– Insert the heater plug.

1. Insert the heater plug into the intended connector.
2. Secure the heater plug by rotating it 45° until it snaps into place.
Step 5:  
**Close the covering hood.**  
Once all cables are properly connected to the furnace base, close the covering hood over the connections.

Step 6:  
**Mount the connection cover.**  
Mount the connection cover and secure it with the fastening screw. Make sure that the lateral catch springs snap into place when mounting the connection cover.

⚠️ The furnace must only be operated with the covering hood closed and the connection cover mounted!

Step 7:  
**Establish additional connections.**  
**Connecting the power**  
Please make sure that the voltage indicated on the rating plate complies with the local power supply. Subsequently, connect the power cord with the power socket of the furnace.

⚠️ The furnace must only be operated with the supplied power cord!

**Connecting the vacuum pump**  
Connect the vacuum pump plug with the vacuum pump socket. We recommend using only a vacuum pump from Ivoclar Vivadent (VP4 / VPS), since these pumps are especially coordinated with the press furnace. If other pumps are used, please observe and do not exceed the maximum power consumption.

⚠️ Do not shorten the vacuum hose! The minimum length of the vacuum hose is 1.6 m.
4.4 Removing the furnace head

Before the connection cover and the covering hood are removed, the furnace has to be switched off and the power cord disconnected from the power socket.

1. Loosen and remove the knurled screw of the connection cover.
2. Dismount the connection cover.
3. Open the covering hood.
4. Release the heater plug and disconnect it with a 45° anti-clockwise rotation.
5. Disconnect the press drive plug.
6. Disconnect the thermocouple plug.
7. Disconnect the vacuum hose.
8. Press the leaf spring with a finger, lift off the furnace head at the same time and remove it.

Make sure that the furnace head has completely cooled down before it is removed (fire hazard).

4.5 Initial start-up

1. Connect the power cord with the wall socket.
2. Switch the On / Off button at the rear of the furnace to position I.

4.5.1 Basic settings upon initial start-up

Upon the initial start-up of the new furnace, a number of basic settings are required. These settings will be stored and will not appear anymore upon the following starting procedure.

Step 1:
Select the language.
The touch buttons (display keys) can be operated by tapping the display.

Select the desired language using the [Arrow up / down] buttons. Confirm the entry with the green button. The [Next] button is used to reach the next entry screen.
4. Installation and Initial Start-Up

Step 2:
Select the desired temperature unit.

![Temperature unit](image)

The [Next] button is used to reach the next entry screen.

Step 3:
Select the date format.

![Date format](image)

Confirm the entry with the green button. The [Next] button is used to reach the next entry screen.

Step 4:
Set the date (day, month, year).

![Date](image)

Confirm the entry with the green button. The [Next] button is used to reach the next entry screen.

Step 5:
Set the time (hours, minutes, seconds).

![Time](image)

Confirm the entry with the green button. The [Next] button is used to reach the next entry screen.

The initial start-up and entry of the basic settings are now complete. The furnace will now automatically conduct a self-test.
4.5.2 Start screen and self-test

Immediately after switching on, the display briefly shows the start screen. Subsequently, the furnace conducts an automatic self-test. The performance of all furnace components is automatically checked.

---

**The following functions are checked:**

<table>
<thead>
<tr>
<th>Function</th>
<th>Status</th>
</tr>
</thead>
</table>
| **Furnace head test** | ![✓](https://i.imgur.com/5.jpg) The furnace head test is in progress.  
| ![✓](https://i.imgur.com/5.jpg) The furnace head test was successful.  
| ![✗](https://i.imgur.com/3.jpg) The furnace head test failed. Please note the error message on the display.  |
| **Vacuum test** | ![✓](https://i.imgur.com/5.jpg) The vacuum test is in progress.  
| ![✓](https://i.imgur.com/5.jpg) The vacuum test was successful.  
| ![✗](https://i.imgur.com/3.jpg) The vacuum test failed. Please note the error message on the display.  |
| **IRT test** | ![✓](https://i.imgur.com/5.jpg) The IRT test is in progress.

| ![✗](https://i.imgur.com/3.jpg) The IRT test failed. Please note the error message on the display.  |

**The following information is displayed:**

<table>
<thead>
<tr>
<th>Information</th>
<th>Status</th>
</tr>
</thead>
</table>
| **Temperature calibration** | ![✓](https://i.imgur.com/5.jpg) Temperature calibration of the furnace is not required.  
| ![✗](https://i.imgur.com/3.jpg) Some time has passed since the last calibration.  
| Please conduct a calibration procedure.  |
| **Power supply** | ![✓](https://i.imgur.com/5.jpg) The power supply voltage is in the acceptable range.  
| ![✗](https://i.imgur.com/3.jpg) The power supply is outside the acceptable range.  |
| **Software version** | The currently installed software version is displayed.  |

If the self-test has been successful, the furnace will automatically display the screen to select the desired operating mode (firing / pressing).

If the program recognizes a malfunction during the test, a corresponding error message with the corresponding rectification information appears on the display.

The acoustic signal and the error message can be acknowledged with the corresponding buttons.
4. Installation and Initial Start-Up

Press the **Next** button to confirm the self-test.

Before the first firing, the firing chamber should be dehumidified using the dehumidification program (see Chapter 5.4 for details).

Please note that the furnace may require a certain acclimation time after having been set-up. Particularly if the furnace was exposed to considerable temperature changes (water condensation).
5. Operation and Configuration

5.1 Introduction to the operation

5.1.1 Control unit
The Programat EP 5010 is equipped with a wide-screen colour display. The furnace can be intuitively operated by means of the membrane-sealed keypad and the touch screen. The touch buttons can be actuated by slightly tapping the display with the fingertip and the furnace runs the desired function.

The user interface in the display is divided into three sections:
1. Information bar (e.g. indication of the current furnace temperature, selected program type, etc.)
2. Main screen (e.g. editing firing programs, changing the settings, etc.)
3. Navigation bar (e.g. scrolling, scrolling to higher levels, opening favourite programs, etc.)

5.1.2 Explanation of the key functions

<table>
<thead>
<tr>
<th>Key</th>
<th>Function</th>
</tr>
</thead>
</table>
| ![HOME key](image) | HOME key  
Switch to home screen (main menu). |
| ![PROGRAM key](image) | PROGRAM key  
Press once: Display of the currently selected program.  
Press twice: Switch to the program selection via number entry. |
| ![CHANGE OPERATING MODE key](image) | CHANGE OPERATING MODE key  
By pressing this key, you can switch between the firing and the press mode. |
| ![IRT key](image) | IRT key  
With this key, the infrared image of the object can be displayed during the closing process. |
| ![POWER SAVING key](image) | POWER SAVING key  
By pressing this key, the power-saving function is activated (only possible with the furnace head closed and the furnace on idle). The display shows the power-saving icon. Pressing any key ends the automatically activated power-saving function. |
| ![OPEN FURNACE HEAD key](image) | OPEN FURNACE HEAD key  
Quick cooling with the furnace head open:  
If the furnace head is completely open and the OPEN FURNACE HEAD key is pressed again, the quick cooling function is activated. I.e. the vacuum pump is switched on for 5 minutes. This function can be stopped at any time by pressing the STOP, CLOSE FURNACE HEAD or START key. This function can be activated any time when the furnace head is open. |
| ![CLOSE FURNACE HEAD key](image) | CLOSE FURNACE HEAD key |
5. Operation and Configuration

STOP key
A program in progress can be paused by pressing the STOP key and stopped by pressing STOP twice. Movement of the furnace head can be stopped at any time by pressing STOP. Acoustic signals can be confirmed by pressing the STOP key.

START key (Start LED)
Starts the selected program. The green LED indicates that a program is active. If the program is paused (1x STOP), the Start LED flashes until renewed pressing of START results in the program being resumed.

5.1.3 Explanation of the most important touch buttons

<table>
<thead>
<tr>
<th>Button</th>
<th>Function</th>
</tr>
</thead>
<tbody>
<tr>
<td>Scroll left / Scroll right</td>
<td>With these buttons, you can e.g. scroll to page 2 of the home screen.</td>
</tr>
<tr>
<td>Back with note</td>
<td>With this button, you can change to the &quot;next higher&quot; menu level. The button indicates to which screen you change, e.g. to the home screen.</td>
</tr>
<tr>
<td>Close</td>
<td>With this button, you can leave sub-menus.</td>
</tr>
<tr>
<td>Confirm entry</td>
<td>This button is used to confirm an entry. If the button appears pale green, no entry has been made yet or the value entered is not in the acceptable range.</td>
</tr>
<tr>
<td>Cancel entry</td>
<td>This button is used to cancel an entry. Changed values are not saved.</td>
</tr>
<tr>
<td>Program parameters</td>
<td>Pressing these buttons allows you to change program parameters. A selection list or numeric pad for entering the values appears. The upper half of the button itself shows the parameter in question (e.g. closing time), while the lower half shows the entered value (e.g. 00:18).</td>
</tr>
<tr>
<td>On / Off button</td>
<td>This button is used to switch functions on or off.</td>
</tr>
<tr>
<td>Parameters</td>
<td>By pressing these buttons, a selection list or numeric pad for entering the values appears.</td>
</tr>
</tbody>
</table>

5.1.4 Explanation of the numeric pad and selection list

- Numeric pad
The numeric pad enables the entering and changing of parameters, e.g. in firing programs or setting menus. Additionally, the currently set value as well as the minimum and maximum values are indicated.

An entry must be confirmed with the green button. As soon as the entry has been confirmed, the numeric pad is closed. If the button appears pale green, the value is not in the acceptable range.

The numeric pad can be closed with the red button, without any parameters being changed.
– Selection list
In the selection list, the desired parameter can be selected by using the up / down arrows. An entry must be confirmed with the green button. After that, the selection list is closed.
The selection list can be closed with the red button, without any parameters being changed.

5.1.5 Selecting the operating mode
The furnace can be operated in two different modes:
– Pressing:
  Only press programs can be selected. The stand-by temperature of the furnace is set to 700 °C.
– Firing:
  Only firing programs can be selected. For Ivoclar Vivadent programs, the stand-by temperature of the furnace is set to 403 °C.

In order to switch between the press and the firing modes, you must press the CHANGE OPERATING MODE key to change the operating mode (Chapter 5.1.2).

Once the CHANGE OPERATING MODE key has been pressed, the operating mode can be selected.

1. Select the desired operating mode.

2. After the operating mode is selected, a note is displayed indicating the different stand-by temperatures of the respective operating modes.

Switching from "Firing" to "Pressing": Make sure that the furnace has heated up to 700 °C before starting the press program.

Switching from "Pressing" to "Firing": Make sure that the furnace has cooled down to 403 °C before starting the firing program.

In the information bar, the operating mode is displayed in addition to the temperature.

<table>
<thead>
<tr>
<th>Icon</th>
<th>Meaning</th>
</tr>
</thead>
</table>
| ![down icon] | Operating mode "Pressing"
If this icon is displayed in the information bar, the operating mode "Pressing" is active. In this operating mode, only press programs are available and the stand-by temperature is set to 700 °C. |
| ![fire icon] | Operating mode "Firing"
If this icon is displayed in the information bar, the operating mode "Firing" is active. In this operating mode, only firing programs are available and the stand-by temperature is set to 403 °C. |
5.1.6 Explanation of the home screen
After the furnace is switched on, the display shows the home screen. All functions of the Programat can be selected from this screen. You can switch back to the home screen with the HOME key.

By pressing a selection button, you will reach the corresponding menu (e.g. firing programs, settings, calibration, etc.).

By pressing the [Arrow] buttons, the next page of the home screen is accessed, where additional functions are available. The circles between the arrows indicate the number of pages. The current page is marked with a light dot.

5.1.7 Explanation of the speaker signals
– Upon closing the furnace head below 100 °C
  There is a risk of crushing when closing the furnace head. If the furnace head is closed below 100 °C, the user is alerted to the hazard by an acoustic signal.

– Upon completion of the self-test
  To inform the user that the automatic self-test has been successfully completed, a pre-set, not modifiable melody is played.

– Furnace head open and temperature below 560 °C
  To inform the user that the temperature in the open furnace head has dropped below 560 °C, the selected melody is played (5 seconds). Thus, the furnace head has sufficiently cooled down for the next program start. The acoustic signal can be stopped by pressing the STOP key.

– Furnace head open and temperature below 360 °C
  To inform the user that the temperature in the open furnace head has dropped below 360 °C, the selected melody is played. If the first playback (10 seconds) is not acknowledged with the STOP key, a second playback sounds after 5 minutes (for 5 minutes) to signal that the furnace head is cooling down. After that, no further signal is played. If one of the two playbacks is acknowledged with the STOP key, the signal transmitter is switched off and no further signals will be sounded.

– For error messages
  Error messages are acoustically supported with the ‘error melody’ (endless beep). The acoustic signal can be confirmed by pressing the STOP key, while the error message still remains visible. If the error message is acknowledged with the corresponding button, the signal transmitter is also switched off.

– For active press cycle
  To inform the user that the press cycle has been started, a pre-set, not modifiable melody is played.

– Upon completion of the press program
  To inform the user that the press program has been completed, the selected melody is played continuously.
5.1.8 Optical status and progress display (OSD)
The Optical Status Display (12a) shows the most important statuses of the furnace. The following activities are shown:

<table>
<thead>
<tr>
<th>Colour</th>
<th>Activity</th>
</tr>
</thead>
<tbody>
<tr>
<td>Yellow</td>
<td>The furnace is performing a self-test or is not ready for use, as the recommended temperature range for a program start has not yet been reached.</td>
</tr>
<tr>
<td>Yellow (flashing)</td>
<td>Information, notification or error message</td>
</tr>
<tr>
<td>Green</td>
<td>The furnace is ready for use; the currently selected program can be started.</td>
</tr>
<tr>
<td>Orange</td>
<td>Program is closing the furnace head or is in predrying mode.</td>
</tr>
<tr>
<td>Red</td>
<td>Program is heating up or is in holding time mode.</td>
</tr>
<tr>
<td>Blue</td>
<td>Program is in long-term cooling or is opening the furnace head.</td>
</tr>
</tbody>
</table>

Progress display:
During an active process, the progress of the program is also shown by the OSD. This is done by stage-to-stage lighting up of the lateral OSD (12b).

5.1.9 User code
For safety reasons, a user code is required for certain settings. The user code ex factory is as follows: 1234

The user code can be individually changed. See Chapter 5.4 Settings for details.

5.2 Firing programs and programming options
5.2.1 Program structure
The furnace offers several types of programs:

a. programs for Ivoclar Vivadent materials
b. 500 free, individually adjustable programs
c. 500 free, individually adjustable programs on a USB stick.

The program types are subdivided into program groups. Each program group consists of 20 programs. All programs are equivalent and therefore full-fledged programs. All the parameters can be independently set in each program.

a) Programs for Ivoclar Vivadent materials (see enclosed Program Table)
When the furnace is delivered ex factory, the Ivoclar Vivadent programs already contain the recommended material parameter settings and are write-protected. Consequently, it is not possible to accidentally overwrite these programs.
If required, the parameters can be changed and overwritten at any time, if the programs are to be used for other purposes. Therefore, these programs are also available as individual programs.

In case of software updates, individually changed parameters in Ivoclar Vivadent programs might be reset to the factory settings or changed!

b) 500 free, individually adjustable programs
The programs are designed in such a way that they can be either used as conventional, one-stage programs or as two-stage programs, if required. The programs and program groups can be individually named.

In case of software updates, individually changed parameters in free programs are NOT reset to the factory settings or changed!
c) 500 free, individually adjustable programs on a USB stick
In a first step, a USB stick must be prepared as program memory (see Chapter 5.4). The programs are designed in such a way that they can be either used as conventional, one-stage programs or as two-stage programs, if required. The programs and program groups can be individually named.

In case of software updates, individually changed parameters in free programs are NOT reset to the factory settings or changed!

5.2.2 Program selection
The program selection requires only few steps:

1. Select the program type.

2. Select the program group.

3. Select the program.

4. Start the program or edit the program parameters.
The firing program can now be started or, as an alternative, the program parameters can be changed.

Quick program selection
Pressing the P key switches to the program screen of the current program. When the program screen is shown, pressing the P key again switches to the quick program selection by means of number entry.
Browsing the programs
If a program has been selected, the neighbouring programs can be accessed by pressing the [Arrow] buttons.

5.2.3 Program screen / Editing programs
If a program has been selected, the program screen is displayed. The firing programs can be changed or edited in this screen.

For Ivoclar Vivadent programs, the write-protection must be deactivated first before any parameters can be changed.

The following information is displayed:

1. Information bar
   - Program designation
   - Current furnace temperature

2. Firing curve
   - Closing time, holding time
   - Temperature increase rate, holding temperature, long-term cooling
   - Vacuum on, vacuum off

3. Program options
   In addition to the parameters shown in the firing curve, several other options are available that can be activated by pressing the [Options] button. The icons in the grid show the activated options.

4. IRT options
   Different operating modes are available for the Programat Infrared Technology. These modes can be selected by pressing the [IRT] button. The icon in the grid shows the activated IRT operating mode.

Editing parameters
Parameters are entered or edited in two steps.

Example: Setting the holding temperature

1. Press the [T] button.

2. Enter the desired holding temperature and confirm by pressing the green button.

The holding temperature was successfully changed. All the other parameters shown in the firing curve can be changed / edited in the same way.
Changing program options
Pressing the [Options] button opens the menu for advanced program options.

Example 1: Deactivating the write-protection

1. Press the [Options] button.

2. Press the [Deactivate Write-Protection] button.

3. Press the [Close] button to leave the Options menu.

4. The write-protection was successfully deactivated.
   The lock symbol is no longer shown in the display next to the [Options] button.
Example 2: Changing the predrying temperature

1. Press the [Options] button.

2. Press the [Predrying Temperature] button.

3. Enter the desired predrying temperature and confirm by pressing the green button.

4. The predrying temperature was successfully changed.
Press the [Close] button to leave the Options menu.

The program screen now shows the symbol "Predrying active" next to the [Options] button.
Selecting the IRT operating mode
By pressing the [IRT] button, the menu for selecting the IRT operating mode is opened.

1. Press the [IRT] button.

2. Select the desired IRT operating mode.
The menu is automatically closed once the desired operating mode has been selected. The selected IRT mode is displayed in the program display next to the [IRT] button.
Two-stage programs
A two-stage program permits firing procedures on two temperature levels with different parameters (e.g., Holding time Stage 1, Holding time Stage 2) to be conducted.

The function "Two-stage program" can be selected in the Options menu.

The program screen now shows the "Two-stage program" symbol next to the [Options] button and the firing curve for the parameter entry is indicated in two stages.

Automatic plausibility check of the parameters
The furnace is equipped with an automatic plausibility check function. The parameters are checked upon each program start. In case of contradictory parameter combinations, the program stops automatically and the respective information is indicated.
5.2.4 Adjustable parameters in the program screen

**S** – Closing time
The closing time controls the duration of the furnace head closing process.
*Value range: 00:18 – 30:00 (mm:ss)*

**t/1** – Temperature increase rate (for two-stage programs: t1)
The temperature increase rate defines by how many degrees per minute the furnace heats up.
*Value range °C: 10 – 140 °C/min; Value range °F: 18 – 252 °F/min*

**T** – Holding temperature (for two-stage programs: T1)
The holding temperature defines the temperature at which a firing process is conducted.
*Value range °C: 100 – 1200 °C; Value range °F: 212 – 2192 °F*

**H** – Holding time (for two-stage programs: H1)
The holding time indicates how long an object is fired at the holding temperature.
*Value range: 00:00 – 60:00 (mm:ss)*

**V1** – Vacuum on (for two-stage programs: V11)
The parameter defines the temperature at which the vacuum is activated.
*Value range °C: Off or 1 – 1200 °C; Value range °F: 0 or 34 – 2192 °F*

**V2** – Vacuum off (for two-stage programs: V21)
The parameter defines the temperature at which the vacuum is deactivated.

- **Holding time without vacuum**: If V2 is set one degree lower than the holding temperature, the vacuum is ended before the holding time.
- **Holding time with vacuum**: If V2 corresponds to the holding temperature, the vacuum is maintained during the entire holding time.
- **Long-term cooling with vacuum**: If V2 is set one degree higher than the holding temperature, the vacuum is maintained during long-term cooling.
*Value range °C: Off or 1 – 1200 °C; Value range °F: 0 or 34 – 2192 °F*

**L** – Long-term cooling
If long-term cooling is activated, the furnace cools to the set temperature (L) at the end of the holding time with the furnace head closed.
*Value range °C: Off or 50 – 1200 °C; Value range °F: 0 or 122 – 2192 °F*

**tL** – Cooling rate
Can only be set if long-term cooling "L" is activated. This parameter defines by how many degrees per minute the furnace cools down.
*Value range °C: Off or 1 – 50 °C/min; Value range °F: Off or 2 – 90 °F/min*

**t2/1** – Temperature increase rate Stage 2
This parameter defines for the second temperature level by how many degrees per minute the furnace heats up.
*Value range °C: 10 – 140 °C/min; Value range °F: 18 – 252 °F/min*

**T2** – Holding temperature Stage 2
The holding temperature for the second temperature level defines the temperature at which a firing process is conducted.
*Value range °C: 100 – 1200 °C; Value range °F: 212 – 2192 °F*

**H2** – Holding time Stage 2
The holding time for the second temperature level indicates how long an object is fired at the holding temperature.
*Value range: 00:00 – 60:00 (mm:ss)*

**V12** – Vacuum on Stage 2
This parameter defines the temperature at which the vacuum for the second temperature level is activated.
*Value range °C: Off or 1 – 1200 °C; Value range °F: 0 or 34 – 2192 °F*

**V22** – Vacuum off Stage 2
This parameter defines the temperature at which the vacuum for the second temperature level is deactivated. If V22 corresponds to the holding temperature, the vacuum is maintained during the entire holding time.
*Value range °C: Off or 1 – 1200 °C; Value range °F: 0 or 34 – 2192 °F*
5.2.5 Adjustable parameters in the Options menu

In addition to the parameters shown in the firing curve, several other options are available that can be activated by pressing the [Options] button (see Chapter 5.2.3). Active options are displayed as icons in the grid next to the [Options] button.

The following firing program options are available:

Night program
If this function is active, the furnace head remains open after the firing process, the heater is switched off and the green Start LED flashes. No acoustic signals are sounded. Once the temperature drops below 100 °C, the furnace head closes, the heater remains switched off and the furnace cools down to room temperature.

Advantages of the night function:
After a power failure, the night program is always resumed. The program is resumed at the position, at which the power failure occurred. After a longer power failure, the furnace head does not heat up to stand-by temperature and the object is protected at room temperature with the furnace head closed.

If the night program function is switched on, it is active only for the next program cycle.

Setting options: On / Off

Program write-protection
If the program write-protection is activated, the program parameters and program options cannot be changed. This is to prevent accidental changes to the program.

Setting options: On / Off

B
Stand-by temperature
The stand-by temperature is the temperature to which the furnace heats up immediately after switching on. The temperature is maintained with the furnace head closed and when no firing process is active.

Programat furnaces are programmed to a stand-by temperature of 403 °C in the factory. The temperature can be individually set for each program.

Value range °C: 100 – 700 °C; Value range °F: 212 – 1292 °F

Two-stage program
If this function is activated, the selected program can be programmed on two temperature levels.

Setting options: On / Off

IRT mode (only available if Infrared Technology "ON")
If the IRT system is active, three different IRT modes can be selected:

- Standard: suitable for all conventional firing cycles (e.g. layering, opaquer, wash, gloss, glaze, characterization firing, etc.) with the Programat firing tray
- Crystallization: exclusively suitable for crystallization firing cycles (e.g. IPS e.max CAD crystallization) with the IPS e.max CAD Crystallization Tray
- Fusion: exclusively suitable for fusion firing cycles (e.g. IPS e.max CAD fusion / crystallization CAD-on) with the IPS e.max CAD Crystallization Tray

If IRT is activated, the mode “Standard” is used as the default setting.

Setting options: Standard, crystallization, fusion

Predrying temperature Stage 1 (only available if Infrared Technology "OFF")
In a program with activated predrying in Stage 1, the desired "predrying temperature" is reached (heating or cooling) after the start with the furnace head open. Once this temperature is reached, predrying is conducted during the "predrying holding time". Once this time has elapsed, the furnace closes within the desired closing time.

The predrying temperature for Stage 1 can be set as follows:

Value range °C: OFF or 100 – 700 °C; Value range °F: OFF or 212 – 1292 °F

Predrying holding time Stage 1 (only available if Infrared Technology "OFF")
This parameter defines the duration of the predrying process for Stage 1 once the desired predrying temperature has been reached.

Value range OFF or 00:00 – 60:00 (mm:ss)
### 5. Operation and Configuration

<table>
<thead>
<tr>
<th>Function</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Predrying temperature Stage 2</strong></td>
<td>(only available if Infrared Technology “OFF”) Predrying for Stage 2 is only available if Stage 1 has also been activated. The parameters are set in the same way. At this stage, the furnace head is half open. Value range °C: OFF or 100 – 700 °C; Value range °F: OFF or 212 1292 °F</td>
</tr>
<tr>
<td><strong>Predrying holding time Stage 2</strong></td>
<td>(only available if Infrared Technology “OFF”) This parameter defines the duration of the predrying process for Stage 2 once the desired predrying temperature has been reached. Value range OFF or 00:00 – 60:00 (mm:ss)</td>
</tr>
<tr>
<td><strong>Thermo Shock Protection (TSP)</strong></td>
<td>(only available if Infrared Technology “OFF”) The TSP function protects the dental-lab work during the closing process. For this purpose, the TSP function gauges the temperature of the firing chamber in the furnace head upon the start of the firing program. If required, the closing path within the set closing time S is adjusted. Setting options: On / Off</td>
</tr>
<tr>
<td><strong>Pre-vacuum</strong></td>
<td>If a firing program with pre-vacuum is conducted, the vacuum pump is switched on at the end of the closing time (as soon as the furnace head is closed) and runs until the pre-vacuum time has elapsed. The heating phase begins after the pre-vacuum time is over. The value V1 is ignored upon the start of a program with individually activated pre-vacuum. The vacuum is maintained until V2 is reached. V2 must be higher than the stand-by temperature B. Setting options: OFF or 01:00 – 05:00 (mm:ss)</td>
</tr>
<tr>
<td><strong>Vacuum holding time</strong></td>
<td>With this function, the vacuum share of the holding time can be individually set. Example: H (Holding time) = 02:00 (mm:ss). If a vacuum share of 50% is desired, the parameter “Vacuum holding time (Hv)” has to be set to 01:00 (mm:ss). Setting options: OFF or 00:01 – 60:00 (mm:ss)</td>
</tr>
<tr>
<td><strong>Quick opening of the furnace head</strong></td>
<td>If the option &quot;Quick opening of the furnace head&quot; is activated, the furnace head opens at maximum speed at the end of the holding time. Setting options: On / Off</td>
</tr>
<tr>
<td><strong>Extraction system</strong></td>
<td>If this function is activated, any vapours are extracted during the closing process by means of the vacuum pump, and fresh air is sucked in for a better firing and drying result. Setting options: On / Off</td>
</tr>
</tbody>
</table>
### 5.6 Adjustable parameters in the IRT menu

If the infrared technology is activated, the temperature is measured directly on the surface of the object during the predrying or closing process. The furnace regulates the closing and predrying process based on the data measured by the infrared camera.

Homogeneous drying and heating of the object is ensured by the heating of the heating muffle and the furnace head movements (furnace head opens and closes depending on the situation).

Different operating modes are available for the IRT function. These modes can be selected by pressing the [IRT] button:

<table>
<thead>
<tr>
<th>Mode</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>IRT</strong></td>
<td>The IRT operating mode is the preferred and recommended operating mode for standard veneer and all-ceramic firing processes. If the IRT operating mode is selected, the infrared camera controls the predrying and closing process in such a way that the processes are performed very quickly and efficiently. The time saving compared to conventional predrying and closing processes amounts up to 20%.</td>
</tr>
<tr>
<td><strong>IRT Plus</strong></td>
<td>If the IRT Plus operating mode is selected, the infrared camera controls the predrying and closing process with a reduced drying rate. As a result, predrying and closing takes longer. The IRT Plus operating mode is recommended for opaquer firing cycles and large restorations.</td>
</tr>
<tr>
<td><strong>IRT Off</strong></td>
<td>If the IRT Off mode is selected, the infrared camera is deactivated. Predrying and closing processes are performed as usual, e.g. by manually entering the closing time.</td>
</tr>
</tbody>
</table>
5.2.7 Starting and stopping programs / the operating indicator

Once the program is started by pressing START, the firing curve display appears.

The following information is displayed:

- **Information bar**
  The program name and the current furnace temperature are shown in the information bar in the upper margin of the display.

- **Main area**
  The vacuum is shown on the left side of the main screen. The progress of the program is shown in the form of a firing curve. The estimated remaining time is also displayed in 10-second intervals. If no vacuum is activated, the vacuum indicator and all the corresponding parameters are blank.

  The process status is displayed in colour in the firing curve:
  - Orange: Program is closing the furnace head or is in predrying mode.
  - Red: Program is heating up or is in holding time mode.
  - Blue: Program is in long-term cooling or is opening the furnace head.

  Active firing program options are shown in the grid next to the [Options] button.

  If a two-stage program is selected, the firing curve is shown in two stages.
Changing the operating indicator
The active firing program can be displayed in two ways:
– operating indicator “firing curve”
– operating indicator “remaining time”.

If the [Display] button is pressed during an active program, the operating indicator can be switched.

If the [Display] button is pressed while the firing curve is displayed, the remaining time will be shown. The remaining time indicator informs the user about the time that is left until the process is completed. The remaining time is displayed in the centre of the screen in large characters and is thus visible even from a distance.

The factory settings of the furnace are such that the firing curve is automatically displayed upon the start of a program.
5.2.8 Pausing the active program
- Press STOP once to pause a running program (green LED flashing). Press the STOP key twice to completely stop the program or press START to continue.
- If the program is paused, the display shows a flashing "Pause" and the indicator changes back to the program screen.
- If a program is stopped prematurely, "Vacuum release" is shown in the display during the flooding of the firing chamber.

5.2.9 Changing the parameters while the program is running
Most program parameters, which have not yet been executed, can be changed while the program is paused. Change the parameters as described in Chapter 5.2.3.

5.2.10 Managing programs
Press the [Admin] button in the program view to open the Admin menu.

The following functions are available:
- copy program
- reset program to factory settings
- select product brand
- rename group
- rename program.
5. Operation and Configuration

5.2.11 Copying programs
With the copy wizard, individual programs, program groups and program sectors can be copied. The source and target of the copy process can be selected in the copy assistant.

Programs and program groups cannot be copied into the sector for Ivoclar Vivadent programs. This sector is protected and reserved for original Ivoclar Vivadent programs.

1. Press the corresponding [Execute] button in the Admin menu.

2. Select the objects to be copied.
   (program sector, program group or individual program)

3. Make a selection depending on the desired copy content.
   (program sector, program group, or individual program)

4. Select a target.
   Confirm the selection with the green button or close the copy wizard with the red button.

5. The copy process can be continued with the green button.
   The red button is used to abort the copy process.
5.2.12 Resetting the program to factory settings
This function is used to reset a changed program to factory settings.

1. Press the corresponding [Execute] button in the Admin menu.

2. Enter the user code to confirm that the program is to be reset to factory settings.

3. The program has been successfully reset to factory settings.

5.2.13 Selecting the product brand
The product brand for the current group can be selected.

1. Press the corresponding [Execute] button in the Admin menu.

2. Select the desired product brand. Confirm the entry with the green button.
5. Operation and Configuration

5.2.14 Renaming the program or program group
The current program and current program group can be renamed (only possible for individual programs).

1. Press the corresponding button in the Admin menu and select whether the program or the group should be renamed.

2. Enter the desired program or group name. Confirm the entry with the green button.
5. Operation and Configuration

5.3 Press programs and programming options

The furnace offers different press program ranges:

a. press programs for Ivoclar Vivadent materials
b. 20 free, individually adjustable press programs.

a) Press programs for Ivoclar Vivadent materials
When the furnace is delivered ex factory, the Ivoclar Vivadent programs already contain the recommended material parameters. They cannot be deleted or overwritten. The parameters are not shown in the software.

b) Free, individually adjustable press programs
Individual press programs can be freely programmed and renamed.

In case of software updates, individually changed parameters in free programs are NOT reset to the factory settings or changed!

5.3.1 Program selection in the "Pressing" mode and with activated IRT investment ring analysis
The program selection requires only a few steps:

1. Select the program type.

2. Select the program.

3. Load the furnace.
You can now load the firing chamber with the hot investment ring. The IRT investment ring analysis starts immediately after loading of the furnace:
   – automatic identification of the investment ring size
   – check of the investment ring preheating temperature.
For details regarding the IRT investment ring analysis see Chapter 5.4.

4. Start or edit the press program.
Now, the press program can be started. Individual press programs can be edited.
3. Select the investment ring size.
Depending on the program selected, different investment ring sizes can be chosen:
– 100-gram investment rings
– 200-gram investment rings
– 300-gram investment rings.

4. Start or edit the press program.
Now, the press program can be started.
Ivoclar Vivadent press programs cannot be changed or edited.
Individual press programs can be edited (see Chapter 5.3.4.).
5. Results panel
The following information is displayed at the end of the press program:
- press time (mm:ss)
- press distance (mm).
By pressing the [Confirmation] button, the results panel is closed and the program selection is displayed.

5.3.3 Starting and stopping press programs / the operating indicator
Once the press program has been started by pressing the Start key, the operating indicator is shown.

The following information is displayed:

Information bar:
The current furnace temperature and the program area are shown in the information bar in the upper margin of the display.

Main area:
The following information is displayed in the main area:
- selected program and investment ring size
- vacuum display
- remaining time and progress bar
- animation (preheating, holding, pressing).

5.3.4 Editing individual press programs
For the all-ceramic systems from Ivoclar Vivadent (e.g. IPS e.max, IPS Empress Esthetic), only the original Ivoclar Vivadent press programs must be used as they are especially coordinated with the respective materials.

After the individual press program was selected, the following information is displayed on the program screen:

1. Information bar:
- Program name, investment ring size
- Current furnace temperature

2. Firing curve:
- Holding time
- Temperature increase rate, holding temperature
- Stop speed

3. Program options
In addition to the parameters shown in the firing curve, several other options are available that can be activated by pressing the [Options] button. The icons in the grid show the activated options.
Editing parameters
Parameters are entered or edited in two steps.
Example: Setting the holding temperature

1. Press the [T] button.

2. Enter the desired holding temperature and confirm by pressing the green button.

The holding temperature was successfully changed. All the other parameters shown in the firing curve can be changed / edited in the same way.

Changing the program options
Pressing the [Options] button opens the menu for advanced program options.
Example 1: Activating the write-protection

1. Press the [Options] button.

2. Press the [Activate Write-Protection] button.

3. Press the [Back] button to leave the Options menu.
4. The write-protection was successfully activated. The lock symbol is shown next to the [Options] button in the display.

5. Operation and Configuration

5.3.5 Adjustable parameters in the program screen

- **t** – Temperature increase rate
  
  The temperature increase rate defines by how many degrees per minute the furnace heats up.

  Value range °C: 10–140 °C/min; Value range °F: 18–252 °F/min

- **T** – Holding temperature
  
  The holding temperature defines the temperature at which the press process is started.

  Value range °C: 100–1200 °C; Value range °F: 212–2192 °F

- **H** – Holding time
  
  The press process starts once the holding time ends.

  Value range: 00:00–60:00 (mm:ss)

- **E** – Stop speed
  
  This parameter defines the end of the press process.

  For the layering technique, Ivoclar Vivadent recommends a stop speed of 300 µm/min; for the staining technique a stop speed of 150 µm/min.

  - Higher values (stop speed of e.g. 300 µm/min) result in the press cycle being stopped sooner.
  - Lower values (stop speed of e.g. 100 µm/min) result in the press cycle being stopped later. Consequently, the press cycle is prolonged.

  Value range: 0–10,000 (µm/min)

5.3.6 Adjustable parameters in the Options menu

In addition to the parameters shown in the firing curve, several other options are available that can be activated by pressing the [Options] button. Active options are displayed as icons in the grid next to the [Options] button.

The following press program options are available:

- **Program write-protection**
  
  If the program write-protection is activated, the program parameters and program options cannot be changed. This is to prevent accidental changes to the program.

  Setting options: On / Off

- **B** – Stand-by temperature
  
  The stand-by temperature is the temperature to which the furnace heats up immediately after switching on. The temperature is maintained with the furnace head closed and when no firing or press process is activated.

  In the "Pressing" mode, Programat furnaces feature an automatic stand-by temperature of 700 °C as the factory setting. The temperature can be individually set for each program.

  Value range °C: 100–700 °C; Value range °F: 212–1292 °F
5.4 Advanced functions of the furnace

5.4.1 Settings
To reach the Settings menu, scroll to page 2 in the home screen and press the [Settings] button.

Example: Changing the brightness of the display

1. Open the Settings menu.
Scroll to page 2 in the home screen and press the [Settings] button.

2. Open the display brightness setting.
The [Arrow] buttons are used to scroll through the Settings menu.
Press the button until the setting “Display brightness” appears in the display.

3. Change the brightness of the display.
Press the touch button in the line “Display brightness”.

4. Select the desired display brightness.
Select the desired display brightness in percent and confirm the entry with the green button or cancel the entry with the red button.
The setting was changed.

To return to the home screen, press either the [Home] touch button in the navigation bar or the HOME key on the membrane-sealed keypad.
## 5. Operation and Configuration

The following parameters can be changed in the Settings menu:

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
<th>Setting options</th>
</tr>
</thead>
<tbody>
<tr>
<td>Temperature unit</td>
<td>Choose between °C and °F.</td>
<td>°C / °F</td>
</tr>
<tr>
<td>Vacuum unit</td>
<td>Choose between mbar and hPa.</td>
<td>mbar and hPa</td>
</tr>
<tr>
<td>Vacuum quality</td>
<td>Set the final vacuum value. This value defines the negative pressure in the furnace head at which the furnace has reached a vacuum quality of 100%.</td>
<td>0 – 200 mbar</td>
</tr>
<tr>
<td>Language</td>
<td>Select the desired operating language.</td>
<td>German, English, Italian, French, Spanish, Portuguese, Swedish, Dutch, Turkish, Russian, Polish, Croatian, Traditional Chinese, Mandarin Chinese, Finnish, Norwegian, Slovenian, Czech, Slovakian, Hungarian, Hindi, Japanese, Korean, Arabic, Farsi</td>
</tr>
<tr>
<td>Volume</td>
<td>Select the desired volume of the acoustic signals.</td>
<td>Off / 20 – 100% in 10%-steps</td>
</tr>
<tr>
<td>Melody</td>
<td>Select the desired melody for the acoustic signals.</td>
<td>Melody 1 to 20</td>
</tr>
<tr>
<td>Time</td>
<td>Set the current time.</td>
<td>hh:mm:ss</td>
</tr>
<tr>
<td>Date</td>
<td>Set the current date.</td>
<td>according to the set date format</td>
</tr>
<tr>
<td>Date format</td>
<td>Set the date format.</td>
<td>dd:mm:yyyy; mm:dd:yyyy</td>
</tr>
<tr>
<td>Automatic power-saving mode</td>
<td>If the power-saving mode is activated and the furnace head closed, this function is automatically started after 30 minutes, provided the furnace is in idle mode and no key is pressed during that time. The display shows the power-saving icon. Pressing any key ends the automatically activated power-saving function. The power-saving mode is not available in the press operating mode.</td>
<td>On / Off</td>
</tr>
<tr>
<td>Optical Status Display (OSD)</td>
<td>The OSD can be switched on or off.</td>
<td>Off / On 10 – 100% in 10%-steps</td>
</tr>
<tr>
<td>Display brightness</td>
<td>Set the display brightness.</td>
<td>20 – 100% in 10%-steps</td>
</tr>
<tr>
<td>User code</td>
<td>The user code can be individually changed.</td>
<td>1000 to 9999</td>
</tr>
</tbody>
</table>

It is recommended to make a note of the individually changed user code and to keep it separately. If forgotten, the user code may only be reset with the help of the After Sales Service.
5. Operation and Configuration

**Unit of length**
Chose between millimetres and inch.

*Setting options: mm / inch*

**Operating mode**
Set the desired operating mode. See Chapter 5.4.8 Operating mode for details.

*Setting options: Normal / Protected / Production*

**Furnace number**
Enter the furnace number. The number will be prominently shown in the display when the operating mode “Production” is activated.

*Setting options: 1 to 99*

**Protocolling**
If this function is activated, the program data are saved in a protocol entry after every firing procedure. The following protocol settings are available:

*Inactive: Protocolling is not active.*

*Printer: At the end of the program, the parameters used are logged and saved in the furnace. Additionally, the protocols are printed on a connected USB printer.*

*PC: At the end of the program, the parameters used are logged and saved in the furnace. If the furnace is connected to the PrograBase software, the saved table entries are synchronized with the connected laptop / PC. Protocols can be edited, saved and printed with the PrograBase software.*

*Table: At the end of the program, the parameters used are logged and saved in the furnace. The data can be requested from the Diagnosis menu (for more details see Chapter 5.4.6).*

*Setting options: Inactive / Printer / PC / Table*

**Laboratory name**
Enter the name of the laboratory. The name is automatically added to the protocols.

*Setting options: Laboratory name entry*

**Calibration interval**
Set the notification as to when the next calibration should be conducted.

*Setting options: 1 / 3 / 6 / 12 months*

**Reset heating muffle firing hours to zero**
If this function is executed, the heating muffle firing hours are set to "zero". This function can only be executed by entering the user code.

*Setting options: Execute*

**Resetting vacuum pump hours to zero**
If this function is executed, the vacuum pump hours are set to "zero". This function can only be executed by entering the user code.

*Setting options: Execute*

**Resetting to factory settings**
If this function is executed, all programs and settings are reset to the status before the initial start-up. This function can only be executed by entering the user code.

*Setting options: Execute*

**Preparing USB stick programs**
If this function is executed, a USB stick is prepared as program memory.

**Loading an individual start screen**
This function is used to load an individual start screen from a USB stick. Once an individual start screen has been loaded, it will be shown for a few seconds when the furnace is switched on the next time.

**Loading an individual melody**
This function is used to load an individual melody. This melody will be played as acoustic signal as described in Chapter 5.1.6.
5. Operation and Configuration

Acoustic signal at the beginning of the press process
Switch the acoustic signal at the beginning of the press process on or off.
Setting options: On / Off

Timer
With this menu item, the timer can be set.
Setting options: Off / Monday to Sunday on-time and off-time

Setting up a WLAN connection
A WLAN connection can be set-up with this function. See Chapter 5.4.9 for details.
Setting options: Off / Monday to Sunday on-time and off-time

IRT investment ring analysis
The IRT investment ring analysis can be switched on or off.
Setting options: On / Off

The IRT investment ring analysis includes the following functions:

– Automatic recognition of investment ring size
   If a preheated investment ring is placed into the furnace, the program for the respective investment ring size is automatically selected. If the size cannot be defined by the infrared camera or if the size of the placed investment ring is not available in the selected program, the manual investment ring selection is automatically opened.

– Check of the investment ring temperature
   During the loading process, the IRT system automatically checks if the investment ring has been preheated according to the instructions. The following situations are possible:
   • The investment ring has the correct temperature: This is confirmed with a green check. The program can be started immediately.
   • Investment ring is too hot: After the program start, the note “Waiting for correct investment ring temperature” is displayed. The furnace waits automatically and the furnace head closes only once the investment ring has reached the optimum start temperature.
   • Investment ring is too cold: In this case, a note is displayed. The heating muffle was not sufficiently preheated or the transfer time from the preheating furnace to the press furnace was too long. There is a high risk for an incorrect pressing. Ivoclar Vivadent recommends to sufficiently preheat the investment ring. After the note has been acknowledged, the press program may still be started.

At the end of the press program, the results panel is displayed. In the lower area, the temperature of the investment ring at the time of loading is displayed.

This feature allows the user to coordinate the preheating furnace with the press furnace:

- The investment ring was slightly too cold at the time of loading. Increase the temperature of the preheating furnace or shorten the transfer time. Check the display again after the next press cycle.
- The investment ring was optimally preheated at the time of loading. Preheating furnace, transfer time and press furnace are optimally coordinated with each other.
- The investment ring was slightly too hot at the time of loading. Reduce the temperature of the preheating furnace. Check the display again after the next press cycle.

If the IRT investment ring analysis is activated, it is recommended to exclusively use original Ivoclar Vivadent investment ring systems.
5.4.2 Information

To reach the screen for the furnace information, scroll to page 3 in the home screen and press the [Information] touch button.

Example: Displaying information

1. Open the Information menu.
Scroll to page 3 in the home screen and press the [Information] button.

2. Read the information.
The information is displayed on several pages. Use the [Arrow] buttons to scroll to the next information page.

To return to the home screen, press either the [Home] touch button in the navigation bar or the HOME key on the membrane-sealed keypad.

The following information can be read off:

<table>
<thead>
<tr>
<th>S/N</th>
<th>Serial number of the furnace</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Software version</th>
</tr>
</thead>
<tbody>
<tr>
<td>Currently installed software version of the furnace. Software updates are available from <a href="http://www.ivoclarvivadent.com/downloadcenter">www.ivoclarvivadent.com/downloadcenter</a>.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Last calibration</th>
</tr>
</thead>
<tbody>
<tr>
<td>Date of the last calibration</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Mains voltage</th>
</tr>
</thead>
<tbody>
<tr>
<td>Currently measured mains voltage</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Last dehumidification</th>
</tr>
</thead>
<tbody>
<tr>
<td>Date of the last dehumidification of the furnace</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Operating hours</th>
</tr>
</thead>
<tbody>
<tr>
<td>Number of operating hours</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Firing hours</th>
</tr>
</thead>
<tbody>
<tr>
<td>Number of firing hours</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Vacuum hours</th>
</tr>
</thead>
<tbody>
<tr>
<td>Number of operating hours of the vacuum pump</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>IP address</th>
</tr>
</thead>
<tbody>
<tr>
<td>IP address indication</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>WLAN IP address</th>
</tr>
</thead>
<tbody>
<tr>
<td>WLAN IP address indication</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Internet connection</th>
</tr>
</thead>
<tbody>
<tr>
<td>Indicates if the furnace is connected to the Internet</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Press procedures</th>
</tr>
</thead>
<tbody>
<tr>
<td>Number of all press cycles</td>

</tbody>
</table>

<table>
<thead>
<tr>
<th>Press cycles since last calibration</th>
</tr>
</thead>
<tbody>
<tr>
<td>Number of press cycles since the last calibration</td>
</tr>
</tbody>
</table>
5. Operation and Configuration

5.4.3 Temperature calibration
The thermocouple and heating muffle of the furnace may be subject to changes which affect the furnace temperature, depending on the mode of operation and the frequency of use. Conduct an automatic temperature calibration at least every six months.

Temperature calibration requires only few steps:

1. Open the temperature calibration.
Scroll to page 2 in the home screen and press the [Temperature Calibration] button.

The furnace must be heated up and have reached its stand-by temperature (403 °C) before the calibration is started.

2. Start the calibration.
The display shows the last calibration value and the date of the last calibration.
Press the START key on the membrane-sealed keypad to start the calibration. Follow the instructions on the display.

3. Remove the firing plate.
Remove the firing plate from the furnace using the furnace tongs and place it on the cooling tray.

4. Insert the ATK2 sample.
Carefully grip the upper part of the ATK2 using the furnace tongs (Caution: fracture risk of the ceramic) and insert it into the holes designated for this purpose until it snaps into place.
5. Press the sample into place.
If necessary, use the furnace tongs to apply slight pressure to the centre of the calibration base until the calibration sample clicks into place. Observe the corresponding markings.

6. Start the calibration.
Press the START key to start the calibration program. The progress of the calibration program is shown in the display.

7. Complete the calibration.
The result is displayed at the end of the calibration.

Temperature calibration successful
Temperature calibration failed

The calibration value is the difference between the measured current temperature and the desired set temperature.

At the end of the program, open the furnace head and carefully remove the ATK2 sample using the furnace tongs and place it on the cooling tray to allow it to cool. Reinsert the firing plate using the furnace tongs.

To return to the home screen, press either the [Home] touch button in the navigation bar or the HOME key on the membrane-sealed keypad.
5. Operation and Configuration

5.4.4 Data backup
With the data backup function, operating data and individual programs can be backed up on a USB stick. We recommend doing this, for example, before a software update or before sending in the furnace for maintenance purposes.

Furnace data saved on a USB stick can be restored on the furnace.

The data backup and data restoring procedures require only few steps:

1. Open the Data Backup menu.
   Scroll to page 3 in the home screen and press the [Data Backup] button.

2. Conduct the data backup.
   Connect a USB stick to the furnace and press the [Execute] button.

3. Complete the data backup.
   - Data backup successful
   - Data backup failed

To return to the home screen, press either the [Home] touch button in the navigation bar or the HOME key on the membrane-sealed keypad.
5.4.5 Software update
Software updates can be easily installed on the furnace by means of a USB stick. A USB stick which contains the current software file (e.g. EP 5010_V1.10.iv) is required for the update. The software version on the USB stick must be higher than the one installed on the furnace (see Selection – Information).

The free software updates for Programat furnaces are available from www.ivoclarvivadent.com/downloadcenter.

A software update requires only few steps:

1. Open the Software Update menu.
Scroll to page 4 in the home screen and press the [Software Update] button.

2. Conduct the software update.
If the USB stick with the software file is already connected, the furnace automatically searches for a valid software file. If the USB stick has not yet been connected with the furnace, do so now. Press the [Execute] button.

3. The status bar shows the progress of the update.

4. Complete the software update.
The following message is displayed:

- ✔️ Software update successful
- ❌ Software update failed

The furnace has to be switched off and on again by means of the mains switch at the rear of the furnace to complete the software update.

Important information
Please note that modified Ivoclar Vivadent programs may be overwritten during a software update. Individual programs are not affected and will not be overwritten.
5.4.6 Diagnosis
Scroll to page 3 in the home screen and press the [Diagnosis] button.

The following programs are available in the Diagnosis menu:
- tests (e.g. vacuum test, heater test, etc.)
- error table (saved error messages)
- remote diagnostics
- firing protocol table
- press protocol table
- service.

5.4.6.1 Tests (test programs)
- Vacuum test program
  With the vacuum test program, the vacuum performance and tightness of the vacuum system of the furnace can be automatically tested. For that purpose, the achieved (minimum) pressure in mbar is measured and indicated. If the pressure value is below 80 mbar (hPa), the vacuum performance of the system is adequate.

- Heater test
  The quality of the heating muffle can be automatically checked by means of the heater test (duration: approximately 7 minutes). The heating muffle test should only be conducted with the firing chamber empty, since any additional item in the firing chamber (e.g. firing tray) influences the result. Conduct the heater test immediately after switching the furnace on and before any actual firing procedures are conducted. If the furnace is too hot, an incorrect heating muffle quality will be indicated. If the quality of the heating element drops below 50 %, changing the heating element is strongly recommended.

- Keypad / touch test
  Each time the keypad or the touch buttons are pressed, a short beep sounds to confirm its function.

- Display test
  Two different chequerboard patterns are alternately shown in the entire display. Every individual pixel can be visually checked.

- OSD test
  The OSD test checks the LEDs of the Optical Status Display. During the test, the OSD lights up in different colours.

- IRT test
  This test automatically checks the functioning of the infrared camera.

- Press drive test
  This test automatically checks the functioning of the press drive.

5.4.6.2 Error table
Every error message is saved in the error table after it occurred. The [Arrow] button is used to scroll through the list. The last 20 error messages are listed.
5.4.6.3 Remote diagnostics
The remote diagnostics function helps you in case of a possible problem with your Programat furnace and facilitates the communication between users and the Ivoclar Vivadent After Sales Service.

If the diagnostics function is executed, the furnace generates a diagnostic file which is automatically saved on the USB stick. The file can be sent by e-mail or analyzed by means of PrograBase on a laptop / PC.

The diagnostic file provides furnace information (e.g. installed software version, set modes, etc.), operating data (e.g. operating hours, firing hours, etc.), calibration data (e.g. calibration values, date of the last calibration, etc.), test results and saved error messages.

Generating a diagnostic file:
1. Open the diagnosis function.
Press the [Remote Diagnostics] button in the Diagnosis menu.

2. Generate a diagnostic file.
Connect a USB stick with the furnace. Then, press the [Execute] button.

3. Once the diagnostic file has been generated, the following message is displayed:
   - Diagnostics successful
   - Diagnostics failed

4. Forward or analyze the diagnostic file.
Connect a USB stick with a laptop / PC. The file can only be analyzed by means of the PrograBase software or sent to any e-mail address.
   - If the furnace is connected with a laptop / PC via Ethernet, the file can also be directly opened, forwarded or analyzed by the PrograBase software.

5.4.6.4 Firing protocol table
If the protocol function is activated in the Settings menu (see Chapter 5.4.1 for details), the last 20 firing protocols will be saved in the firing protocol table. The saved firing protocols in this table can be printed, sent to a PC or deleted.

5.4.6.5 Press protocol table
If the protocol function is activated in the Settings menu (see Chapter 5.4.1 for details), the last 20 press protocols will be saved in the press protocol table. The saved press protocols in this table can be printed, sent to a PC or deleted.

5.4.6.6 Service menu
This menu is code-protected and is only accessible by the Ivoclar Vivadent After Sales Service.
5.4.7 Maintenance programs

Scroll to page 3 in the home screen and press the [Maintenance Programs] button.

The following programs are available in the Maintenance Programs menu:

- dehumidification program
- cleaning program.

5.4.7.1 Dehumidification program

Condensation in the insulation of the firing chamber or the vacuum pump results in a poor vacuum and thus in poor firing results. For that reason, the furnace head should be kept closed when the furnace is switched off or is below 100 °C in order to prevent the absorption of humidity.

Conducting the dehumidification program:

1. Open the dehumidification program.

Scroll to page 3 in the home screen and press the [Maintenance Programs] button. Press the [Dehumidification Program] button in the Maintenance Programs menu.

2. Start the dehumidification program.

Press the START key to start the dehumidification program.
3. The status bar shows the progress of the dehumidification program.

During an active dehumidification program, the furnace head is automatically opened and closed.

4. Complete the dehumidification program.

The following message is displayed:

- Dehumidification program successful
- Dehumidification program failed

During an active dehumidification program, the furnace head is automatically opened and closed. This supports the evaporation process of the condensed water. Do not interrupt this process.

5.4.7.2 Cleaning program

The cleaning program is used to "clean" the heating muffle (duration: approx. 17 min.). After a cleaning program, it is recommended to calibrate the furnace. In case of problems with discolouration of the ceramic, we recommend cleaning the firing plate or replacing the firing tray material.

To start the cleaning program, proceed as described in the section on the dehumidification program.

5.4.8 Operating mode

Various operating modes can be selected in the Settings menu. In this way, the user safety is enhanced and adjusted to the area of application. The following modes are available:

- **Normal**: All functions of the furnace are available in this mode.
- **Protected**: Programs can only be selected and started in this mode. Programs cannot be changed. Settings or special functions cannot be activated or changed. The protected mode can only be activated or deactivated by entering the user code.
- **Production**: In this mode, only one program can be accessed. Only the functions OPEN / CLOSE FURNACE HEAD and START / STOP program are available. Only that program is available which was loaded in the furnace at the time the "Production" mode was selected. Help notes on the operation are shown in the display. The production mode can only be activated or deactivated by entering the user code.

The selection of the operating mode requires only a few steps:

1. **Change the operating mode.**

Open the Settings menu and press the button in the line "Operating mode".
2. Enter the user code.
Enter the user code and confirm the entry with the green button.

3. Select the operating mode.
Enter the desired operating mode and confirm the entry with the green button.

4. Program screen in the operating mode “Production” (example)

The “Protected” or “Production” modes can be quit by prolonged pressing of the HOME key (at least 3 seconds).
5. Operation and Configuration

5.4.9 Setting up a WLAN connection
A WLAN connection can be set-up in this Settings menu. This function is only available if the Programat WLAN Stick has been connected with the furnace.

The set-up requires only a few steps:

1. Switch WLAN on.

2. Press the [Execute] button to show available WLAN networks.

3. Select the desired network.

4. Enter the WLAN password and confirm with the green button or abort the entry with the red button.

5. The WLAN connection was successfully set up.

The following safety standards for networks are supported:
– WEP 64-bit
– WEP 128-bit
– WPA-PSK TKIP
– WPA-PSK AES
– WPA2-PSK TKIP+AES
– WPA2-PSK AES.

After the initial set-up of the WLAN connection, the furnace automatically connects with the network last used at every new start, provided the network is available.
5. Operation and Configuration

5.5 Multimedia functions

The Programat EP 5010 is equipped with multimedia functions such as photo display, MP3 and video player. The furnace is also equipped with an internal memory. Images can be saved in this memory with the help of the "PrograBase" computer software. In order to use all multimedia functions without PrograBase X10, an external memory (USB stick or SD memory card) containing the corresponding data must be connected.

5.5.1 Photo display

Scroll to page 2 in the home screen and press the [Pictures] button.

1. Select an image.
The desired image can be selected on the right side of the display. The left side of the display contains a preview.

2. Scroll through available image files.
The [Arrow] buttons are used to scroll through the available image files.

3. Switch to full screen view.
The corresponding button is used to switch to the full screen view.

4. Full screen view
In the full screen view, you can scroll through the available image files. The image can be rotated by pressing the corresponding buttons and the full screen view can be ended.
5. Operation and Configuration

5. Zoom an image.
In the full screen view, the image can be enlarged or downsized. To activate the zoom function, press the touch screen for at least one second and move the finger towards the upper right (enlarge) or the lower left (downsize).

An enlarged image can be moved in all directions.

For that purpose, press the touch screen with the finger and move the image in the desired direction.

To return to the home screen, press either the [Home] touch button in the navigation bar or the HOME key on the membrane-sealed keypad.

5.5.2 MP3 player
Scroll to page 2 in the home screen and press the [Music] button.

1. Select a music file.
The desired music file can be selected on the right side of the display.

2. Playback elements
The corresponding buttons are used to change to the next or previous title, as well as to start or stop (or pause) the playback. At the end of a title, the next title is automatically played.
3. Adjust the playback volume.
The corresponding button is used to adjust the volume of the playback.

To return to the home screen, press either the [Home] touch button in the navigation bar or the HOME key on the membrane-sealed keypad. This does not end the music playback. The playback can only be stopped by pressing the corresponding button in the media player (see Step 2).

5.5.3 Video player
Scroll to page 2 in the home screen and press the [Video] button.

1. Select a video.
The desired video file can be selected on the right side of the display. The left side of the display contains a preview.

2. Playback elements
The corresponding buttons are used to change to the next or previous video, as well as to start or stop (or pause) the playback. At the end of a video, the next video is automatically played.

3. Adjust the playback volume.
The corresponding button is used to adjust the volume of the playback.
4. Switch to full screen view.
The corresponding button is used to switch to the full screen view.

5. Full screen view
The corresponding buttons are used to end the full screen view and to adjust the volume.

To return to the home screen, press either the [Home] touch button in the navigation bar or the HOME key on the membrane-sealed keypad.
6. Practical Use

The operating procedure for the Programat EP 5010 will be explained with the help of two examples: one Ivoclar Vivadent and one individual program.

6.1 Firing procedure with an Ivoclar Vivadent program

Step 1:
Switch the furnace on.
Switch the furnace on using the mains switch at the back of the furnace. Subsequently, the furnace conducts an automatic self-test.
Wait until the furnace has reached the set stand-by temperature and/or the Optical Status Display (OSD) lights up in green.

Step 2:
Select the operating mode.
After the self-test has been completed, the selection of the operating modes is displayed. Select the operating mode “Firing”.

Step 3:
Select the program.
Press the [Ivoclar Vivadent Programs] button.
Select the desired program group.
Select the desired program.
6. Practical Use

Step 4:
Load the furnace.
Now, open the furnace head using the OPEN FURNACE HEAD key and position the firing tray with the object in the furnace.

With the Infrared Technology active, position the objects in such a way that the infrared camera has a wide view of the objects. Use the markings on the frame plate (see Figure) for orientation purposes.

Step 5:
Start the program.
Activate the program by pressing the START key. The LED lights up in green. The process is indicated in the firing curve display.

The IRT key (see Chapter 5.1.2) is used to switch to the view of the infrared camera during the closing and predrying process. The corresponding key is pressed again to return to the firing curve display.

The furnace head opens automatically at the end of the program. When the Optical Status Display lights up in green, the furnace is ready for the next program start.
6.2 Firing procedure with an individual program

Step 1:
Switch the furnace on.
Switch the furnace on using the mains switch at the back of the furnace. Subsequently, the furnace conducts an automatic self-test.
Wait until the furnace has reached the pre-set stand-by temperature.

Step 2:
Select the operating mode.
After the self-test has been completed, the selection of the operating modes is displayed. Select the operating mode “Firing”.

Step 3:
Select the program.
Press the [Individual Programs] button.
Select the desired program group.
Select the desired program.
Step 4: Enter the parameters.
Enter your individual parameters and create the desired firing program (see Chapter 5.2.3 for details).

Step 5: Load the furnace.
Now, open the furnace head using the OPEN FURNACE HEAD key and position the firing tray with the object in the furnace.

With the Infrared Technology active, position the objects in such a way that the infrared camera has a wide view of the objects. Use the markings on the frame plate (see Figure) for orientation purposes.

Step 6: Start the program.
Activate the program by pressing the START key. The LED lights up in green. The process is indicated in the firing curve display.

The IRT key (see Chapter 5.1.2) is used to switch to the view of the infrared camera during the closing and predrying process. The corresponding key is pressed again to return to the firing curve display.

The furnace head opens automatically at the end of the program. When the Optical Status Display lights up in green, the furnace is ready for the next program start.
6. Practical Use

6.3 Press procedure with an Ivoclar Vivadent program

Step 1:
Switch the furnace on.
Switch the furnace on using the mains switch at the back of the furnace. Subsequently, the furnace conducts an automatic self-test.
Wait until the furnace has reached the pre-set stand-by temperature.

Step 2:
Select the operating mode.
After the self-test has been completed, the selection of the operating modes is displayed. Select the operating mode “Pressing”.

Step 3:
Select the program.
Press the [Ivoclar Vivadent Programs] button.
Select the desired program.

Step 4:
Select the investment ring size and load the furnace.
– IRT investment ring analysis active:
  Load the furnace with the preheated investment ring. The display shows the next steps and the result of the investment ring analysis.
– IRT investment ring analysis inactive:
  Select the desired investment ring size and then load the furnace with the preheated investment ring. Depending on the program selected, up to three different investment ring sizes can be chosen (100 g / 200 g / 300 g). Not all programs can be run with all the investment ring sizes. Please also refer to the Instructions for Use of the respective material.
Step 5: 
Start the program.
Activate the program by pressing the START key. The LED lights up in green. The progress of the program is shown in the display.

The furnace head opens automatically at the end of the program. The results panel displays the press time, press distance and the investment ring temperature, if the IRT investment ring analysis is activated, at the time of the loading.

After confirmation of the results panel and as soon as the Optical Status Display lights up in green, the furnace is ready for the next program start.
6.4 Press procedure using an individual press program

Step 1:
Switch the furnace on.
Switch the furnace on using the mains switch at the back of the furnace. Subsequently, the furnace conducts an automatic self-test.
Wait until the furnace has reached the pre-set stand-by temperature.

Step 2:
Select the operating mode.
After the self-test has been completed, the selection of the operating modes is displayed. Select the operating mode “Pressing”.

Step 3:
Select the program.
Press the [Individual Programs] button.
Select the desired program.

Step 4:
Select the investment ring size and load the furnace.
– IRT investment ring analysis active:
  Load the furnace with the preheated investment ring. The display shows the next steps and the result of the investment ring analysis.
– IRT investment ring analysis inactive:
  Select the desired investment ring size and then load the furnace with the preheated investment ring.
  Three different investment ring sizes are available for the individual press programs: 100 g, 200 g, 300 g.
Step 5:
Edit the program.
Now enter your individual parameters and create the desired press program. By pressing the [Program] button, the program screen is closed again.

Step 6:
Start the program.
Activate the program by pressing the START key. The LED lights up in green. The progress of the program is shown in the display.

The furnace head opens automatically at the end of the program. The results panel displays the press time, press distance and the investment ring temperature, if the IRT investment ring analysis is activated, at the time of the loading.

After confirmation of the results panel and as soon as the Optical Status Display lights up in green, the furnace is ready for the next program start.
### 6.5 Important notes on the use of the Infrared Technology

The following notes on the Infrared Technology have to be observed to obtain meaningful and correct measuring results from the infrared camera.

<table>
<thead>
<tr>
<th>Note</th>
<th>Loading the furnace in the “Firing” operating mode</th>
</tr>
</thead>
<tbody>
<tr>
<td>With the Infrared Technology active, position the objects in such a way that the infrared camera has a wide view of the objects. Use the markings on the frame plate (see Chapter 6.1) for orientation purposes. If possible, always place the objects on firing pins.</td>
<td></td>
</tr>
<tr>
<td><strong>Do not load the firing chamber with already warmed up objects. In back-to-back firing cycles, the object must always have adequately cooled down.</strong></td>
<td></td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Note</th>
<th>Active process</th>
</tr>
</thead>
<tbody>
<tr>
<td>If a program has been started and the infrared camera is active, the objects must not be moved during the closing and predrying process. This results in faulty measurements and in the closing process being aborted.</td>
<td></td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Note</th>
<th>Firing tray</th>
</tr>
</thead>
<tbody>
<tr>
<td>Firing trays that are not coordinated with the furnace or fitted firing trays can change the temperature at the objects by +/- 20 °C!</td>
<td></td>
</tr>
<tr>
<td>Ivoclar Vivadent recommends using only the original Programat firing tray or the special firing trays stipulated for the respective materials. If another firing tray is used, make sure that the height of the tray corresponds with that of the original firing tray. Higher trays result in faulty measurements of the infrared camera.</td>
<td></td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Note</th>
<th>Unsuitable firing objects and materials</th>
</tr>
</thead>
<tbody>
<tr>
<td>Basically, a temperature measurement with the infrared camera cannot be conducted on metal structures. Therefore, the IRT function must not be used for oxidation firings of metal frameworks!</td>
<td></td>
</tr>
<tr>
<td>Veneered metal frameworks with a metal margin or a holding pin have to be placed in such a way that the metal margin or the holding pin is not caught by the infrared camera, as this may affect the correct temperature measurement.</td>
<td></td>
</tr>
<tr>
<td>Unused firing pins or fan pins should be removed or placed outside the viewing range of the infrared camera.</td>
<td></td>
</tr>
<tr>
<td>When firing very flat objects (e.g. veneers) directly on the honey-comb firing tray or firing pillow, as well as when platinum foil is used, the IRT function must not be used!</td>
<td></td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Note</th>
<th>Several objects</th>
</tr>
</thead>
<tbody>
<tr>
<td>If several and different objects are fired together, large and massive objects have to be preferentially shown to the infrared camera, while small objects can be positioned behind the large objects.</td>
<td></td>
</tr>
<tr>
<td>Wet objects should face the infrared camera. Touch-dried objects can be positioned behind freshly fabricated and wet objects.</td>
<td></td>
</tr>
<tr>
<td>Adding additional objects after the start of the process may result in faulty measurements and the closing process being aborted.</td>
<td></td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Note</th>
<th>Sources of interference</th>
</tr>
</thead>
<tbody>
<tr>
<td>Heat sources within the viewing range of the furnace may interfere with the temperature measurement. In certain cases, this may result in unusually long processes. Sources of interference may include light bulbs, heaters, air conditioners or another furnace.</td>
<td></td>
</tr>
<tr>
<td>Sources of interference in the viewing range of the infrared camera can be easily recognized if the corresponding view is activated. If the source of interference cannot be removed, the interference may be eliminated by slightly rotating the furnace.</td>
<td></td>
</tr>
<tr>
<td>The view on the objects must not be obstructed at any time after the start of the program. This results in the closing process being aborted. If objects from a previous firing cycle are cooling on the cooling tray, they should be placed outside the viewing range of the infrared camera if possible.</td>
<td></td>
</tr>
</tbody>
</table>
7. Maintenance, Cleaning and Diagnosis

This chapter describes the user maintenance and cleaning procedures for the Programat EP 5010. Only those tasks are listed that may be performed by dental professionals. All other tasks must be performed by qualified service personnel at a certified Ivoclar Vivadent Service Center.

7.1 Monitoring and maintenance

The time for these maintenance procedures depends on the frequency of use and the working habits of the users. Therefore, the recommended times are only approximate values.

<table>
<thead>
<tr>
<th>Hazardous area</th>
<th>Part</th>
<th>When</th>
</tr>
</thead>
<tbody>
<tr>
<td>Check all plug-in connections for correct fit.</td>
<td>Various external connections</td>
<td>Weekly</td>
</tr>
<tr>
<td>Check if the furnace head opens smoothly and without excessive noise.</td>
<td>Furnace head opening mechanism</td>
<td>Monthly</td>
</tr>
<tr>
<td>Check if the thermocouple is straight and in the right place.</td>
<td>Thermocouple</td>
<td>Weekly</td>
</tr>
<tr>
<td>Check the insulation for cracks and damages. If the insulation is worn down, it has to be replaced by a certified Ivoclar Vivadent Service Center. Fine hairline cracks on the surface of the insulation are harmless and do not influence the function of the furnace in a negative fashion.</td>
<td>Insulation</td>
<td>Monthly</td>
</tr>
<tr>
<td>Check if the sealing rims of the furnace head and furnace base are clean and undamaged.</td>
<td>Sealing rims of the furnace head and base</td>
<td>Weekly</td>
</tr>
<tr>
<td>Check the keypad for visible damage. If the keypad is damaged, it has to be replaced by a certified Ivoclar Service Center.</td>
<td>Membrane-sealed keypad</td>
<td>Weekly</td>
</tr>
<tr>
<td>Check the temperature: Use the temperature checking set to check and adjust the temperature in the furnace.</td>
<td>Firing chamber</td>
<td>Twice a year</td>
</tr>
<tr>
<td>Check the quartz glass cylinder to make sure that the quartz glass is not defective.</td>
<td>Firing chamber</td>
<td>Daily</td>
</tr>
<tr>
<td>Check if there is condensate in the vacuum hose or firing chamber.</td>
<td>Vacuum hose, firing chamber</td>
<td>Monthly</td>
</tr>
</tbody>
</table>

This furnace has been developed for typical use in dental laboratories. If the product is used in a production enterprise, for industrial applications and for continuous use, premature ageing of the expendable parts has to be expected. The expendable parts are, e.g. the heating muffle, the furnace head sealing rim or the insulation material. Expandable parts are not covered by the warranty. Please also observe the shorter service and maintenance intervals.

In general, the furnace head should not be replaced since the components (furnace head and furnace base) have been coordinated with each other. However, if the furnace head must be replaced for maintenance reasons, subsequent temperature calibration is required.
7.2 Cleaning

The furnace may only be cleaned when it is cool, since there is a burn hazard. Do not use any cleaning solutions. Disconnect the power before cleaning.

The following parts have to be cleaned from time to time:

<table>
<thead>
<tr>
<th>What</th>
<th>When</th>
<th>Cleaning material</th>
</tr>
</thead>
<tbody>
<tr>
<td>Furnace housing and furnace head</td>
<td>If required</td>
<td>Soft, dry cloth</td>
</tr>

<td>If required</td>
<td>With a Programat cleaning cloth</td>
</tr>
<tr>
<td>Cooling tray</td>
<td>Daily</td>
<td>Cleaning brush*</td>
</tr>
<tr>
<td>Insulation</td>
<td>Daily</td>
<td>Cleaning brush*</td>
</tr>
<tr>
<td>Sealing rims of the furnace head and the sealing surface</td>
<td>Daily</td>
<td>Cleaning brush and a soft cloth</td>
</tr>
<tr>
<td>Firing plate</td>
<td>If required</td>
<td>Cleaning brush or sandblasting unit (with glass beads)</td>
</tr>
<tr>
<td>Infrared camera</td>
<td>If required</td>
<td>With a Programat cleaning cloth</td>
</tr>
</tbody>
</table>

*Never clean with compressed air!

7.3 Service note

When the service note appears for the first time, the furnace has already more than 1,500 firing hours. If the service note is acknowledged, it will reappear every 1,000 firing hours.

Ivoclar Vivadent recommends conducting a heater test after a certain number of firing hours and having the heating muffle examined by the Ivoclar Vivadent After Sales Service if necessary.

7.4 Idle mode

We recommend keeping the furnace head closed, particularly if the temperature drops below 150 °C. If the furnace head is open, there is a risk that the insulation absorbs humidity and condensation water develops during firing. This negatively affects the vacuum performance and, consequently, the firing results.

7.5 Power-saving mode

If the furnace is not used for longer periods of time, Ivoclar Vivadent recommends to activate the power-saving mode. With the power-saving mode activated, individual components are switched off and the furnace temperature is reduced to 100 °C.

7.5.1 Automatic power-saving mode

The automatic power-saving mode can be activated in the Settings menu.

If the power-saving mode is activated and the furnace head closed, this function is automatically started after 30 minutes, if the furnace is in idle mode and no key is pressed during that time. The display shows the power-saving icon. Pressing any key ends the automatically activated power-saving function.

7.5.2 POWER SAVING key

The power-saving mode can be manually activated by pressing the POWER SAVING key. This is only possible with the furnace head closed and the furnace on stand-by. The display shows the power-saving icon. Pressing any key ends the automatically activated power-saving function.

The power-saving mode is not available in the press operating mode.
7.6 Replacing the press plunger

The press plunger may be replaced if required. In order to facilitate replacing the press plunger, the following procedure must be followed:

**Step 1:**
*Remove the attachment screw.*
Remove the screw (C) while the furnace head is closed.

**Step 2:**
*Remove the press drive cover.*
First firmly push the cover to the back (arrow 1) and then remove it by lifting it (arrow 2).

**Step 3:**
*Loosen the press plunger.*
Unscrew the clamping screw of the press plunger (64) by turning it approx. one half turn.
Step 4:
Open the furnace head with the OPEN FURNACE HEAD key. Once the furnace head is wide open, switch the furnace off, **disconnect the power plug**, and allow the furnace to cool to room temperature.

Step 5:
Pull the press plunger (65) with slightly rotating movements from the split taper socket (63) with one hand and pull down the press plunger with the other hand.

**Contraindication:**
Do not touch the thermocouple when replacing the press plunger.

Step 6:
Push the white press plunger (65) with the taper ahead into the guide bush. Push the press plunger with slightly rotating movements into its split taper socket (63) and fasten the screw (64).

**Note:**
The furnace must only be operated with the press drive cover mounted!

**Contraindication:**
Never touch the press drive during operation. There is a risk of burning and crushing.

Step 7:
Place the press drive cover (A) and fasten it with the screw (C).

Step 8:
Connect the power and switch the furnace on.
8. What if ...

This chapter will help you to recognize malfunctions and take appropriate measures.

8.1 Error messages

During operation, the furnace continuously monitors all the functions. If an error is detected, the respective error message is displayed.

The acoustic signal and the error message can be acknowledged with the corresponding buttons.

The following error messages may be displayed. If there are any questions, please contact the Ivoclar Vivadent After Sales Service.

*If there are any questions, please contact the Ivoclar Vivadent After Sales Service.
8. What if....?

8.4 Repair

Repairs may only be carried out by a certified Ivoclar Vivadent Service Center. Please refer to the addresses on the last page of these Operating Instructions.

If repairs during the warranty period are not carried out by a certified Ivoclar Vivadent Service Center, the warranty will expire immediately. Please refer to the warranty regulations for more details.

8.5 Resetting to factory settings

The furnace can be reset to the original settings, by resetting to factory settings. In this process, all programs, melodies and volume adjustments are irrevocably reset to the factory settings.

For that purpose, proceed as follows:

1. Open the Settings menu.
   Scroll to page 2 in the home screen and press the [Settings] button.

2. Open the setting "Reset to factory settings".
   The [Arrow] button is used to scroll through the Settings menu. Press the button until the setting "Reset to factory settings" appears in the display.

3. Reset to factory settings.
   Press the [Execute] button in "Reset to factory settings".

4. Enter the user code.
   Enter the user code (1234) and confirm the entry with the green button or cancel the entry with the red button.
5. Complete the "Reset to factory settings".
The following message is displayed:
  ✔️ Reset to factory settings successful
  ✗ Reset to factory settings failed

To return to the home screen, press either the [Home] touch button in the navigation bar or the HOME key on the membrane-sealed keypad.
9. Product Specifications

9.1 Delivery form
- Programat EP 5010
- Power cord
- Vacuum hose
- Programat Firing Tray Kit 2
- Automatic Temperature Checking Set ATK2 (test set)
- USB download cable
- Cooling grid
- Programat WLAN Kit
- Various accessories

Recommended accessories
- Programat Accessories Set
- Automatic Temperature Checking Set (ATK2)
- Vacuum pump VP5

Acceptable data for pumps of other manufacturers:

|                         | 250 W / max. leakage current 0.75 mA | < 50 mbar |
| Final vacuum:           | Only tested pumps should be used.    |          |

|                         | 110–120 V: | 125 V / T15A (heating circuit) | 125 V / T15A (vacuum pump) |
| Values of electric fuses| 200–240 V: | 250 V / T8A (heating circuit) | 250 V / T3.15A (vacuum pump) |

|                         | 110–120 V: | Diameter 6.3 x 32 mm |
| Dimensions of electric fuses | 200–240 V: | Diameter 5 x 20 mm |

|                         | Depth: 495 mm |
| Dimensions of the closed furnace | Width: 320 mm / 395 mm (with cooling tray) |
|                            | height: 550 mm |

|                         | Diameter: 90 mm |
| Usable size of the firing chamber | Height: 80 mm |

|                         | 1200 °C |
| Max. firing temperature  |          |

|                         | 20.5 kg |
| Weight                  |          |

Safety notes
The furnace complies with the following guidelines:
- UL 61010-1:2004
- CAN/CSA-C22.2 No. 61010-1:2004
- IEC 61010-2-010:2003
- EN 61010-2-010:2003
- CAN/CSA-C22.2 No. 61010-2-010:2004
- IEC 61010-1:2010
- EN 61010-1:2010
- IEC 61010-1:2001
- EN 61010-1:2001
- UL 61010-1:2012
- CAN/CSA-C22.2 No. 61010-1:2012

Radio protection / electromagnetic compatibility: EMC tested
9. Product Specifications

9.3 Acceptable operating conditions

– Acceptable ambient temperature: +5 °C to +40 °C
– Acceptable humidity range: Max. relative humidity 80% for temperatures up to 31 °C, gradually decreasing to 50% relative humidity at 40 °C, condensation excluded
– Acceptable ambient pressure: The furnace is tested for use at altitudes of up to 2,000 m above sea level.

9.4 Acceptable transportation and storage conditions

– Acceptable temperature range: -20 °C to +65 °C
– Acceptable humidity range: Max. 80% relative humidity
– Acceptable ambient pressure: 500 mbar to 1060 mbar

Use only the original packaging together with the corresponding foam material for shipping purposes.
10. Appendix

10.1 Firing program table

A program table (°C / °F) is enclosed in these Operating Instructions. Should this not be the case, please contact the Ivoclar Vivadent Service Center.

Important information

The current program tables are also available at:

www.ivoclarvivadent.com/downloadcenter

The program tables can be downloaded from the Internet as PDF files. Please note, that the version of the firing program table should correspond to the software version which is used on your furnace.

10.2 Press program table
